

# Generative AI prompts for designers

Ensure that all text in the Forma UI (for example, empty states and error messages) is consistent, clear, and grammatically correct. Assist UX and visual designers in reviewing or creating texts when a content designer isn't available, thus helping them speed up the process.

**The Why?**  
(Why is this important?)

A content designer may not always be available to assist with UX writing, especially when quick help is necessary. For instance, some microcopy might be written by developers in squads, requiring a designer to respond quickly to enhance it before it's integrated into the code.

**Requirements**  
(How will you achieve this?)

- Promote use of generative AI among designers for quick text requests
- Develop reusable prompts for Autodesk GPT
- Integrate essential style guidelines directly into these prompts
- Provide examples of successful interactions

**Background information**

Many of the concepts and ideas presented in this document were inspired by the work led by Helena Wahlstrom. I highly recommend checking the link provided in the header.
