

# UX Design

## User flows in Forma

Each user flow may vary when building your extension; however, to maintain a good user flow within your extension, it's advisable to adhere to certain best practices. This involves organizing the flow in a **logical order**, such as placing parameters and settings first, followed by validation of actions. In many countries where your extension will be used, people typically read from left to right and from top to bottom, following either the **Z-shaped** or **F-shaped pattern**. By aligning with this reading pattern, you can ensure a smoother and more intuitive user experience with your extension.

### Basic shaped pattern

### Panel examples

#### Basic vertical user flow

**Title**

Slider 1: 2,5 m

Value input field: 13 m

Numeric input: 42

Radio group 1 (selected)

Radio group 2

Radio group 3

Checkbox 1

Checkbox 2 (selected)

Checkbox 3 (selected)

**Actions and validations:**

- Preview
- Export images (highlighted in blue)

#### Multi panel interaction
